ANIKET SANDIP KOTE

AI Engineer

Focus: Agentic AI, RAG & LLM Systems

Also: Full-Stack, Data & Automation

aniket.kote080799@gmail.com | +91 9405492147 | +44 7823 704335 | India | linkedin.com/in/aniket-kote-a14826169

Year	Degree	Institute	CGPA
2024 – 2025	MSc, Data Science	University of Greenwich, UK	–
2018 – 2022	BE, Computer Science	Savitribai Phule Pune University, India	**8.67**

PROFESSIONAL SUMMARY

AI and full-stack engineer with hands-on experience designing, shipping and operating LLM-powered products, Retrieval-Augmented Generation (RAG) pipelines and agentic automation in production. As Team Lead, Consultant and Developer at Dextra Labs, architected and led an AI deal-intelligence Chrome extension for Gmail (**30+** beta users), built a **9**-step multi-agent GTM automation system as a Claude Code plugin, and contributed backend engineering to a working-capital and subsidy-claims platform live with **455,000+** distributors and **1.25M+** retailers. Earlier career in data analytics, RPA and Power BI, plus an MSc in Data Science (University of Greenwich), gives a strong grounding in data pipelines, reporting and stakeholder communication. Comfortable owning delivery end to end: architecture, prompt engineering, testing, deployment and iteration.

WORK EXPERIENCE

Dextra Labs — *Dec 2025 – Present*

Team Lead, Consultant & Developer (AI, Automation & Full-Stack)

- Architected and led an AI deal-intelligence Chrome extension for Gmail: designed the RAG/LLM agent pipeline with tool-calling against the Gmail API and took it from idea through evaluation to a live Chrome Web Store launch with **30+** beta users.
- Worked with the GTM team to build a **9**-step multi-agent system that sources leads and creates outreach campaigns end to end, built entirely in Claude Code and delivered as a Claude Code plugin that needs only a spec sheet from the sales team as input.
- Designed retrieval-grounding logic and structured function-calling patterns to keep LLM outputs grounded in real deal context, improving factual consistency and delivering the evaluation and reliability work needed to move the agent from prototype to production.
- Built and maintained full-stack/backend services for a working-capital and subsidy-claims platform live with **455,000+** distributors and **1.25M+** retailers, supporting **$75M+** in processed secondary sales.
- Directed a **2**–**4** person engineering team from concept to launch on two products, turning goals from Dextra Labs leadership and client-side founders/CTOs into prioritised, shipped requirements; main technical decision-maker for stakeholders.
- Owned automation and AI-product delivery end to end: scoping, building, testing, shipping and improving.
- Reduced deployment time by **80%** by containerising and operating production services on GCP and Azure with Docker and Kubernetes, improving release reliability and operational readiness.

Automan Solutions — *May 2025 – Nov 2025*

Freelance Developer (Remote)

- Delivered two custom AI applications for small-business clients as sole technical decision-maker, owning the full lifecycle from discovery and use-case selection through architecture, build and go-live, reducing manual effort by **75%**.
- Designed and deployed tool-integrated automation agents for customer support and operational insight, cutting support workload by **50%**.

IGT Solutions — *Jan 2025 – Apr 2025*

GenAI Intern (Remote)

- Designed and built a proof-of-concept generative-AI customer-support chatbot in Python using open-source LLMs, with intent recognition, entity extraction and context-aware dialogue.
- Improved chatbot response accuracy by designing intent-recognition and sentiment-tagging models integrated with a vector database; worked with engineering teams on model performance tuning.
- Engineered prompt templates and tuned model parameters to boost response relevance and reduce off-topic outputs.
- Integrated FAQ lookup, simple scheduling and sentiment tagging via REST APIs and built the user interface in HTML, CSS and JavaScript.

CreoNexTech — *Oct 2023 – Apr 2025*

Freelance Data Analyst & RPA Developer (Remote)

- Cut data-ingestion latency by **40%** by building Python/SQL automation pipelines that replaced manual data handling, and presented insights and technical trade-offs directly to clients.
- Deployed analytics tools (Power BI, advanced Excel) to track business performance across branch operations.
- Built custom JavaScript/CSS applications to improve usability and productivity; worked with product managers to identify business requirements and refine product value streams.
- Provided technical guidance on automation and data-analysis tools to support successful project delivery and customer satisfaction.

Neebal Technologies, Mumbai, India — *Jan 2022 – Sep 2023*

Associate Software Engineer – Data Analyst, RPA & Power BI Developer

- Reduced manual workload by **70%** by building Python/SQL ETL pipelines, automation scripts and RPA workflows across **17+** internal projects as project lead.
- Cut reporting time from two days to four hours by designing real-time KPI dashboards in Power BI and presenting findings to cross-functional stakeholders in Agile sprints; dashboards supported operational decisions and resource management.
- Created Python-based tools for email automation, data extraction and custom reporting.
- Debugged and optimised data layers to ensure accurate analytics reporting (Power BI; Adobe/Google Analytics).
- Delivered multiple successful proofs of concept and identified opportunities by discussing processes and requirements directly with clients.
- Designed and delivered training programmes on Power Platform best practices and Agile delivery to build team capability.

TECHNICAL SKILLS

GenAI & LLM Systems: RAG pipelines, Agentic AI, Tool/Function Calling, Model Context Protocol (MCP), LangChain, Prompt Engineering, LLM evaluation and retrieval-grounding design, Vector Databases, Claude API, intent recognition, sentiment tagging; working knowledge of TensorFlow, PyTorch and Keras

Programming & APIs: Python (primary), JavaScript, SQL, R, Node.js, VBA, PHP, REST APIs, OAuth2, Flask

Web & UI: HTML, CSS, React.js, Bootstrap

Databases & Vector Stores: PostgreSQL, MongoDB, Oracle, NoSQL, ChromaDB, SQL (advanced)

Data Engineering & Analytics: ETL/ELT pipeline design, Apache Airflow, DBT, Airbyte, Pandas, NumPy, scikit-learn, forecasting, predictive analytics

BI & Reporting: Power BI (DAX), Tableau, Looker, Matplotlib, Seaborn, advanced Excel (Pivot Tables, VLOOKUP), Google Sheets, KPI dashboarding, data storytelling, web analytics (Adobe/Google Analytics)

Automation & Integration: n8n, Zapier, Power Automate, UiPath (Certified), Electroneek (Certified), Selenium, Jenkins, Cron, process auditing

Cloud & DevOps: Google Cloud Platform, Azure, Docker, Kubernetes, GitHub Actions, containerised production deployment, observability and operational readiness

Ways of Working: Agile, Scrum, root cause analysis, team leadership, stakeholder management, requirements gathering, technical documentation, client presentations

KEY PROJECTS

- **Automated Employee Onboarding:** End-to-end system automating account provisioning, asset management and induction training delivery; integrated with HR databases and Active Directory; reduced onboarding setup time across departments by 60%.
- **EBITDA & Workforce Allocation Dashboard (Power BI, DAX, Power Automate):** Interactive dashboard visualising EBITDA and workforce allocation across departments, with real-time data via Power Automate, so

department heads can track performance, spot bottlenecks and forecast resource needs.

- **AWS Alert Email Processing & Tracking (Python):** Tool that ingests, parses and classifies AWS alert emails using regex and NLP techniques, generates concise summaries, and logs alerts to a central tracker connected to Power BI and YouTrack via APIs; reduced manual tracking effort by around 40%.
- **Data Cleaning & EDA Web App (Flask, Bootstrap, AI21 Jamba):** Web application for data cleaning, exploratory data analysis (EDA) and AI-generated summaries.
- **Email Insights Automation (Python):** Smart email fetcher and report generator that automates email processing and produces insight reports.
- **GIS Automation (Python):** Automated data extraction and processing from SVG maps, reducing manual effort by 40%.
- **Product Listing Bot, Freelance (Python, Selenium):** Bot for 1688 marketplace analysis that streamlined the product listing process.
- **Digital Analytics Dashboard:** Dashboard tracking customer journeys, website traffic and performance metrics to support marketing strategy.
- **SQL Optimisation & Data Pipelines (SQL, Excel, Python):** Improved large-query performance and built automated data pipelines, reducing data retrieval time by 40%.

CERTIFICATIONS

- Building with the Claude API – Anthropic (Jun 2026)
- Claude Code in Action – Anthropic (Jun 2026)
- Introduction to Model Context Protocol – Anthropic (Jun 2026)
- Introduction to Agent Skills – Anthropic (Jun 2026)
- Power BI Data Analyst Associate
- UiPath Certified RPA Associate
- Electroneek RPA Developer
- SQL for Data Science – Coursera
- Python for Data Analysis
- SQL badges – HackerRank; SQL and data problem-solving badges – LeetCode

LEADERSHIP & ACTIVITIES

- **Marketing & Sales Lead, The Filming Company, Nashik:** Secured major clients and led a team of 5 to execute marketing strategies.
- **Founder, AskNcapture Media, Nashik:** Produced promotional content, managed creative teams and ensured client satisfaction.
- **Team Leader (Volunteer), 94th All India Marathi Literary Conference:** Managed 50+ volunteers, coordinated logistics and oversaw cultural event operations.
- **Cultural Head, undergraduate institute:** Organised technical and non-technical events.

LANGUAGES & INTERESTS

Languages: English (Professional). **Interests:** data visualisation, videography, automation for business optimisation.
